Declaration on PFAS (Per- and Polyfluoroalkyl Substances)

RINNERT GmbH & Co. KG closely monitors the ongoing regulatory developments concerning the proposed restriction of per- and polyfluoroalkyl substances (PFAS) under the REACH Regulation.

A corresponding restriction proposal is currently under evaluation at the European level. The objective of the proposed legislation is to significantly restrict or gradually phase out the manufacture, placing on the market, and use of PFAS within the European Economic Area (EEA). The final scope of the restriction, as well as the applicable transition periods, has not yet been determined.

We continuously monitor these developments and assess their potential impact on our product portfolio and supply chain. To this end, we maintain regular communication with our suppliers to obtain timely information regarding possible changes in material compositions or regulatory requirements.

Based on our current knowledge, our standard catalogue products do not contain any components that are subject to the PFAS restrictions currently under discussion.

Should this assessment change as a result of new legal requirements or updated regulatory information, we will implement the necessary measures and inform our customers accordingly.

We continuously review our products and processes in light of regulatory developments and ensure that any necessary adjustments are implemented in a timely manner.

Should you have any questions, please do not hesitate to contact us.

Best regards,

Eric Rinnert
CEO
