Sustainability at RINNERT

Specific actions for more responsible use of energy and resources

For us, sustainable action means using resources responsibly, using energy efficiently and integrating more environmentally friendly alternatives into our day-to-day operations wherever possible.

01 Efficient heating

Some of our operational and warehouse areas are heated with air-source heat pumps. This provides an efficient heating solution and reduces our need for fossil fuels.

02 Solar power & e-mobility

Our photovoltaic system generates part of our electricity. The solar energy produced is used, among other things, to charge our company electric vehicles.

03 Responsible shipping

We work with GLS and DPD for our shipments. GLS implements measures to reduce greenhouse gas emissions and conserve resources. With our other shipping partner, DPD, we ship carbon-neutral.

04 Reusing packaging materials

We reuse cardboard boxes that are still in good condition. For cushioning, we use air pillows made from corn starch, among other materials. We also increasingly rely on digital resources instead of printed documents.

05 Less single-use plastic

Where possible, we avoid PVC strapping for hoses. Instead, we use reusable hook-and-loop straps, thereby reducing single-use materials in our processes.

06 Green spaces for fruit & bees

We create and maintain green spaces around our company premises. These include areas with fruit plants as well as bee-friendly areas that provide habitat and food for insects.

07 LED lighting & motion sensors

We use energy-efficient LED lighting in our operational areas. Motion sensors help ensure that lighting is used only where and when it is actually needed.

Step by step towards greater sustainability

We see sustainability as an ongoing process. We therefore review our operations regularly and continue to look for ways to use energy and materials more efficiently, avoid waste and conserve resources.
